HC-CARGO Multifunctions Lamps

LEDs are being used with increasing frequency in automotive lamps.

LEDs offer very long service life, extreme vibration resistance and are considerably more compact compared to most bulb-type lamps.

LEDs also offer a significant safety performance benefit when employed in stop lights. When power is applied they rise to full intensity approximately 200 milliseconds (0.2 seconds) faster than incandescent bulbs. This fast rise time provides following drivers with increased time to react to the appearance of the stop lamps, thus reducing risks of accidents.

Advantages of LED lamps are:

- Reduced power consumption
- Long service intervals
- Vibration, weather and water resistant

The Multifunction Lamps from HC-Cargo are less than 3 cm thick, features 5 functions and are equipped with a reflex triangle. The lamps are fully sealed, which means they are shock and water resistant and have an estimated lifetime of 100.000 hours.

FEATURES

Cargo number	171758	171759
Side	Right	Left
Voltage	12-24V	12-24V
Stop light	x	x
Tail light	x	x
Reverse	x	
Direction Indicator	x	x
Number Plate	x	x
Fog		x
Reflex	x	x
Connector	2000 mm cable	2000 mm cable
ECE	x	x
